

ST. THOMAS' COLLEGE OF ENGINEERING & TECHNOLOGY

College Overview

Institutional identity • history • academic ecosystem • RAG context

Purpose: detailed institutional context for a college-information / RAG hackathon project.

1. Institutional Identity

- St. Thomas' College of Engineering and Technology (STCET) is an engineering and technology institution located in Kolkata, West Bengal, India. The attached context identifies the college as being in the Kidderpore/Khidderpore area of Kolkata.
- The institution is associated with undergraduate and postgraduate education in engineering, technology, computer applications and related disciplines. Its academic environment combines classroom learning, laboratory work, technical projects, student activities and industry-oriented preparation.
- The college's urban location places students within Kolkata's wider educational, industrial and technology ecosystem. This is useful context when describing industry interaction, internships, placements and external events.

2. Academic Environment

- Students typically progress through a semester-based curriculum containing theory subjects, laboratory courses, practical or sessional components, projects, examinations and other academic requirements.
- Engineering education is not limited to lectures: laboratory work, project development, technical events, hackathons, seminars, internships, placements and industry interaction form part of the broader professional-development environment.
- Computer- and AI-oriented study may include programming, databases, algorithms, machine learning, software development and related subjects, while engineering departments also support electronics, electrical and other technical domains.

3. Student & Professional Development

- Student life extends beyond formal coursework through technical clubs, coding activities, cultural programmes, sports, seminars, workshops, hackathons, project exhibitions and student-led events.
- These activities develop communication, teamwork, leadership and practical engineering skills. For a college assistant, these are useful categories for answering questions about what students can do outside classes.
- The technology ecosystem described in the starter context includes programming, AI/ML, data science, cloud computing, cybersecurity, electronics and IoT.

4. Institutional Systems Relevant to a Digital Assistant

- A useful STCET information system should connect admissions, academics, departments, faculty, placements, student activities, facilities and administration.

- The official site separately exposes academic administration, academic calendar, departments, faculty, laboratories, training and placement, newsletters and institutional cells. This makes the college naturally suitable for a retrieval-augmented knowledge base.

5. Data-quality boundary

- The attached context explicitly states that it is a starter context for RAG experimentation, not an authoritative source for current admission rules, fees, placement statistics, examination dates or time-sensitive contact details.
- For production use, current official academic regulations, department pages, admission notices, examination notices, placement notices, academic calendars and official contact information should supplement this document.

6. Suggested RAG metadata

- entity_type: college / institution
- location: Kolkata, West Bengal, India
- topics: overview, academics, campus, student life, technology, placements, administration
- freshness: institutional background is relatively stable; admissions, placements, contacts and schedules are time-sensitive

7. Example User Questions

- What is STCET and where is it located?
- What kind of academic environment does STCET have?
- What activities can students participate in besides classes?
- What topics are relevant for technical projects and hackathons?
- What information should a college RAG assistant retrieve from official sources?

Source & data-quality note

This document combines the attached STCET starter-context PDF with current official STCET web information where explicitly indicated. The attached source describes itself as a structured starter context for RAG experimentation and says that current admissions, fees, placement statistics, examination dates, contacts and other time-sensitive data must be populated from current official sources before deployment. ■filecite■turn0file0■L55-L69■

Official web sources used for current verification include the STCET Faculty Members directory, Courses/Programme pages, Institute Cells directory and Training & Placement Cell. These sources should remain the preferred authority for live answers.
