

ST. THOMAS' COLLEGE OF ENGINEERING & TECHNOLOGY

Academics & Programs

Programs • curriculum • assessment • professional development • RAG entities

Purpose: detailed institutional context for a college-information / RAG hackathon project.

1. Academic Structure

- The attached context describes a semester-based academic model involving theory subjects, laboratory courses, tutorials/practical work, projects, examinations and other academic requirements.
- Assessment can involve internal assessment, practical/sessional work, semester examinations and project evaluation.
- Professional development is connected to technical events, hackathons, seminars, internships, placements and industry interaction.

2. Current Undergraduate Programmes

- STCET's current official course directory lists B.Tech in Computer Science and Engineering, Information Technology, Electronics and Communication Engineering, Electrical Engineering, and Artificial Intelligence and Machine Learning under CSE.
- The official CSE page describes coverage including programming, data structures, algorithms, artificial intelligence, cloud computing and cybersecurity, together with laboratory and industry-oriented preparation.
- The official AIML page describes programming, data structures, machine learning, deep learning, natural language processing, computer vision and cloud computing, with practical training.
- The official IT page describes programming, database management, networking, web technologies, software engineering, data analytics and cybersecurity.

3. Current Postgraduate Programmes

- The official PG course page lists M.Tech in Internet of Things and M.Tech in Artificial Intelligence & Data Science.
- The current AIML programme page gives a two-year, four-semester structure for M.Tech in AI & Data Science and lists an approved intake of 30 students. Admission eligibility is subject to regulatory revision.

4. Department-level Academic Information

- The official Courses page links each department to course offerings, vision and mission, PEO/PSO information, laboratories where available, faculty, technical staff, training and placement, newsletters and innovation in teaching/learning.
- This structure suggests a useful RAG hierarchy: college → department → programme → semester/course → faculty/lab → placement/industry activity.

5. Admission & Eligibility as a Dynamic Knowledge Domain

- Current 2026–27 admission pages publish programme-specific eligibility and entrance-examination information. The official pages state that eligibility criteria are subject to revision by the regulatory authority.
- Because eligibility, intake and dates can change, a production assistant should retrieve the latest admission notice rather than answer from an old static chunk.

6. RAG Metadata & Sample Questions

- entities: programme, department, degree, semester, course, laboratory, admission rule
- attributes: degree level, department, duration, intake, eligibility, curriculum themes, assessment
- questions: What B.Tech programmes are offered? What does AIML cover? How long is M.Tech AI & Data Science? What is the current admission eligibility?

Source & data-quality note

This document combines the attached STCET starter-context PDF with current official STCET web information where explicitly indicated. The attached source describes itself as a structured starter context for RAG experimentation and says that current admissions, fees, placement statistics, examination dates, contacts and other time-sensitive data must be populated from current official sources before deployment. ■filecite■turn0file0■L55-L69■

Official web sources used for current verification include the STCET Faculty Members directory, Courses/Programme pages, Institute Cells directory and Training & Placement Cell. These sources should remain the preferred authority for live answers.
