

ST. THOMAS' COLLEGE OF ENGINEERING & TECHNOLOGY

Research, Innovation & Events

R&D; • IIC • projects • workshops • hackathons • publications

Purpose: detailed institutional context for a college-information / RAG hackathon project.

1. Innovation Ecosystem

- The official institutional-cell directory lists an R&D; Cell, Institutions Innovation Council, Entrepreneurship Development + Skill Development, Publication Cell, Industry Institute Interaction Cell + Consultancy and MOOCS Cell.
- Together these create a useful institutional map for research, innovation, entrepreneurship, publication and external engagement.

2. Technology Domains

- The starter context identifies programming, software development, AI/ML, data science, cloud computing, cybersecurity, electronics and IoT as technology areas relevant to student development.
- These domains can become searchable tags for projects, workshops, hackathons and faculty research interests.

3. Project Workflow

- The attached context proposes a typical technical-project workflow: identify a problem; collect or prepare data; select appropriate technologies; implement a prototype; test the system; document results; and present the final solution.
- This workflow can be converted into a hackathon knowledge module or checklist without assuming that every STCET project follows exactly the same process.

4. Research & Departmental Activity

- The CSE department states that students engage in research-oriented and industry-oriented projects and that it maintains a research laboratory and specialized project laboratory.
- Departmental newsletters and institutional publications can provide time-stamped evidence of publications, events, competitions and student achievements.

5. Events as a Knowledge Category

- Technical talks, seminars, workshops, faculty development programmes, innovation competitions, project exhibitions and hackathons should be stored with date, department, organizer, audience, topic and outcome where official information is available.
- This enables questions such as: What events happened recently? Which department organized them? What technology was discussed? Which students or faculty participated?

6. RAG Questions

- What research facilities are available?
- What innovation cells exist at STCET?
- What is a typical technical-project workflow?
- What technology domains are relevant to STCET projects?
- Which official event/newsletter documents support a particular achievement?

Source & data-quality note

This document combines the attached STCET starter-context PDF with current official STCET web information where explicitly indicated. The attached source describes itself as a structured starter context for RAG experimentation and says that current admissions, fees, placement statistics, examination dates, contacts and other time-sensitive data must be populated from current official sources before deployment. ■filecite■turn0file0■L55-L69■

Official web sources used for current verification include the STCET Faculty Members directory, Courses/Programme pages, Institute Cells directory and Training & Placement Cell. These sources should remain the preferred authority for live answers.
